Yes, the Winesap apple is **moderately disease resistant** and has good resistance to cedar-apple rust, though it is susceptible to scab. Its resistance to common apple diseases like fire blight and powdery mildew is moderate, but it is less resistant to scab.

- **Good resistance:** Winesap is highly resistant to cedar-apple rust.
- **Moderate resistance:** It has moderate resistance to diseases like fire blight and powdery mildew.
- **Susceptible:** It is susceptible to apple scab.
- **Other varieties:** The Stayman Winesap variety is also known to be disease-resistant, particularly against fire blight, notes Barely Rooted and Oregon State University.
